Quality Control Check Repot. Stage: Before Casting Footings (Villas)

Covering blocks check.	
Specified size of covering blocks	Actual size of covering blocks being used
Remarks:	
Earth Work Check.	
Quality of earth work?	☐Good ☐ Avg. ☐ Bad Excess earth shifted away from site? ☐Yes ☐ No
Remarks: () Mwd S	Remarks: (1) Mud should be semoved and alon the footings before casting

Footings Check.

- Mark \checkmark for correct or minor mistake which does not require correction
- Mark X for minor mistake that requires minor correction.
- Mark **XX** for major mistake that requires correction by replacement or re-fixing. Mark **XXX** for major mistake that cannot be corrected.
- Pit size should be 6" to 12"more than the footings size on all sides.
- Excess earth must be shifted away from footings area.
- Depth should be more than or equal to the specified depth. Keep in mind PCC thickness & sand filling wrt to road FFL. PCC should be 3"more than the footing size (or as specified) and in one level. (Level tolerance 1")
- Footing size & depth tolerance is 1". Depth of footing must be marked by paint on column steel.
- 10. Proper pegs must be made for centerline marking on all sides in CRS or brickwork. Marking with rods is not permitted.
- If space between footings is less than 12"then a 4"hollow block wall with mortar is to be raised between the footings. Do not combine the footings.
- Covering blocks of specified thickness must be used (generally 50 mm). Tolerance 1/2".
- Check the specified development lengths for mat and columns.
