To whomsoever it may concern.

I know M/S. Central India Engineering Co. Secunderabad for about 10 years. They are leading manufacturers of various types of Deep Well Hand Pumps, Agro power pumps, Semi-rotary and other pumps. Their products are extensively used by the Government for its Rural Water Supply schemes. As Chief - Engineer, Panchayat Raj, Andhra Pradesh, I used their products in the rural water supply systems. Their products are sturdy and give efficient service. M/S. Central India Engineering Co. are engaged in regular research and development about the deep-well pumps and have brought out many new model pumps. I wish them success.
