Non FR Grade Mineral based polymer core with Aluminium sheet alloy AA 3000 or 5000 series fabricated panels of Approved shade of Metal Cladding with Face sealed joint system with sealants DC 789 grade from Dow corning make or approved equivalent.<br/>The aluminium composite panel cladding sheet shall be coil coated with Kynar 500 based/ hylar 5000 PVDF / Lumiflon / Exterior grade compliance to AAMA2605 based fluoropolymer based resin lead free coating of Approved color and shade on face # 1 and polymer (service) coating on face # 2 with overall weight of not less than 5.08 Kg/m². The ACP panels will be mechanically fixed by necessary hardware to Aluminium Vertical &amp; Horizontal secondary framing members.<br/>The cladding system shall be supported by Primary structural steel horizontal &amp; vertical members in accordance with Tender Drawings and Details.<br/>The Facade Contractor to make provision for Integrating any Facade Lighting into the metal cladding system.<br/>Cladding sheet: 4mm thick Composite Aluminium Panel Comprising of two skins of 0.50mm thick coil cored aluminium sheets sandwiched with Mineral Filled polymer core of 3mm thick and exterior grade coating of PVDF coil coated aluminium with Exterior Grade compliance to AAMA2605 based fluoropolymer resin lead free coating Paint.<br/>ACP approved manufacturer - Alucobond or Approved equivalent. ACP Sheet Non FR<br/>Finish For Aluminium: All concealed aluminium framing profiles shall be clear chromatized.<br/>Finish For Structural Steel : Primer with 1(one) coat of Zinc Rich Epoxy 50 Microns, Intermediate: Epoxy Micaceous Iron Oxide 125microns and finished with 1 (one) coat Polyurethane 50microns<br/>Wind Load : The cladding System shall be designed for 1.12Kpa Normal and 1.49 Kpa Critical wind load as per structural adequacy as per IS 875 part 3.<br/>Anchorage: The anchoring / bracing of the curtain wall glazing to the RCC slab / beams / columns shall be done with hot dip galvanized brackets (Galvanizing to be done confirming to IS:4759-1996 up to 610 gms. per sqm. (80-90 micron thickness). of approved design.<br/>Co-ordination: MEP, civil works for layout marking, facade access &amp; Lighting.<br/>Secondary Steel Structure : Where applicable Quote to Include for Secondary steel supports for framing of metal cladding where ever required<br/>Design the system to absorb +/- 50mm hot structure tolerances. The anchoring / bracing of the Metal cladding to the RCC slab / beams / columns shall be done with providing non powdering pvc / GI shims. Shims of various thickness to adjust the beam level / line variations fixed with SS fasteners in the concrete and to withstand the dead load of the cladding as well as stresses due to wind pressure etc.<br/>All screws used shall be only stainless steel 304 grade. All bolts, nuts and washers used shall be only stainless steel of 316 Grade.</p> |      |            |              |                                             |
