Reminder no. - 02

Dear Sir,

This is again to inform you that, the foul smell issue is not yet resolved and no corrective measures has been taken.

Again, this is for your kind information, the smell is an extreme sewage smell which contains methane gases which is very toxic and hazardous to health.

I have a baby girl who is 09 month year old and we all are living in this condition since past 20 days and this problem had been reported since 52 days.

Even after several reminders, requests were given to your engineers and customer representatives there is no initiative from any of them towards resolving these issues.

Also, multiple seepages on the bathroom walls are there which are also need to be resolved.

I am hopeful that these issues will be taken up seriously as it do include health hazard and its already 52 days since it was reported.

Hope for your understanding and an affirmative action on this matter.
