Dear Sir,

Thank you for immediate response. Since Saturday we are getting water without any hassle. By fixing the boosters we may get water without any issues however there is a possibility that other flats may get affected and also one booster is fixed at tower 28, hence I requested to correct the slopes of pipeline for our tower initially. Your site in charge sirish and supporting staff rahul & narender responded very positively and rectified the slopes of the pipe lines. Since Saturday night schedule we are getting water without any issue. Hope we won't get any issues in future also and we will be getting water in coming days without the need of booster. I once again thank you for the support extended and wish & hope the same cooperation will continue in future also.

Thanks & Regards
Vinay Kumar K

Dear Sir,

This is with reference to my earlier mails on water pipeline issue in tower 27. Though some measures were taken by Mr Shirish by adjusting the valves but the situation is becoming worse day by day since the valve are adjusted frequently for various reasons.especially the problem started after introduction of interconnecting valve.

The purpose of interconnecting valve is to transfer water from A&B to C&D tanks and vice versa.unfortunately it's not used for that purpose and kept ON during water release time and the water is getting diverted to A&B also and the pressure is very less to the end towers and coming shorter duration. The reason for doing this may be anything but ultimately we are the suffering and every day we can't check valve positions to ensure water coming to our flats and even we don't have access to
