

Intl Memo no. 912/114 - Construction

Date: 27.01.2020

Subject: Use of curing compound in place of gunny bags.

Project managers may order Dr. Fixit curing compound costing about Rs. 80/- per liter (package size 20 ltrs & 200 ltrs). Approximate coverage 50 sft per liter.

This may be used for coating columns and other vertical surfaces like retaining walls/lift walls. This is a substitute for curing (gunny bags). After first day no further curing is required.

One coat of the compound has to be applied immediately after de-shuttering (within one working day). It locks in the moisture within the column. As a matter of abundant caution a second coat should be applied the next day (coverage about 80 sft). This will help eliminate use of gunny bags.

Material can be purchased at our cost. Labour charges can be paid @ Rs.1/- per sft (either as LS or Job work). In case material is purchased by painter pay Rs. 2/- for first coat and Rs.1/- for the second coat. If GST bill is raised pay 18% extra.

Soham Modi.
