Utilization Scope

Auto Transfer Switch is a self-acting equipment containing the transfer switching devices and other necessary devices for monitoring supply circuits and for transferring one or more load circuits from one supply to another.

The operating sequence of ATS consists of an automatic transfer of a load from the normal supply to an alternate supply in the event of a monitored supply deviation and automatically returning the load to the normal supply when quality of mains supply is restored. The transfer is with a predetermined time delay and includes an interim off position.

In case of both the normal and the alternate supplies being present, the ATS shall assume the normal supply position, which is termed as 'preferred supply'.

The various utilization categories show the most popular applications of Auto Transfer Switch, as per IEC-60947-6-1.

Nature of current	Utilization Category		Typical applications
	Operations A	Operations B	
Alternating Current	AC-31A	AC-31B	Non-inductive or slightly inductive loads
	AC-32 A	AC-32B	Switching of mixed resistive and inductive loads, including moderate overloads
	AC-33 A	AC-33B	Motor loads or mixed loads including motors, resistive loads and up to 30% incandescent lamp loads
	AC-35 A	AC-35B	Electric discharge lamp loads
	AC-36 A	AC-36B	Incandescent loads
Direct Current	DC-31 A	DC-31B	Resistive loads
	DC-33 A	DC-33B	Motor loads or mixed loads including motors
	DC-36 A	DC-36B	Incandescent lamp load

Note:

In Changeover (C) configuration, no external 12-24 Vac supply is required its operation.

In ATS configuration, the Controller unit requires 12 to 24 volts DC source input for its functioning. The same needs to be made available from an uninterrupted source such as external battery being used for self start generator set etc.
